

Abstract

Associated Ventilator Pneumonia (VAP) is defined as pneumonia that occurs 48 hours or more after a mechanical ventilator is administered. Associated Ventilator Pneumonia (VAP), is the most common form of nosocomial infection encountered in intensive care, especially in patients who use mechanical ventilators (Wiryana, 2007). The purpose of this study is to know the relationship of nurse characteristics to VAP knowledge level in ICU / ICCU Room of Husada Hospital, Central Jakarta. The results showed that there was a significant correlation between age, duration of work, education level with nurse knowledge level about VAP (p value <0,05). Nurses need to improve their ability to use mechanical ventilators to improve the quality of nursing care.

Before submission,

Author Fees

This journal charges the following author fees.

Article Submission: 0.00 (IDR)

Authors are NOT required to pay an Article Submission Fee

Article processing charges (APCs) / Article Publication Fee: 500000.00 (IDR) or 35 USD

If this paper is accepted for publication, you will be asked to pay an Article Publication Fee to cover publications costs, the Journal management and publication in general. The authors or the author's institution is requested to pay a publication fee for each article accepted. The fee covers: DOI registration for each paper and checking the article similarity by turnitin; the final result will be sent to authors (by request).

A waiver or partial waiver of author fees may be decided by the editor in case of lack of funding, excessive length of submitted manuscript or other reasonable reasons provided by the author during the submission. The author should clearly declare that he asks for a waiver in the comments to the Editor box during their submission. A waiver is most likely to be denied if it is not asked in this stage. The waiver will have no effect to the review result.
